

FILL-RITE

The Most Trusted Name in Pumps and Meters

PRODUCT NEWS

LUBE PUMPS

Dear Tuthill Transfer Systems Distributors,

We have recently completed a product line assessment of the Fill-Rite lube pump products. Our intention for this product line was to provide a means of transferring oil in the low-pressure applications. However, we are seeing more and more applications in the field where these pumps are being used for a wider variety of fluids and operating conditions that are outside the design parameters of the products.

We have assessed our strategic intent for the lube market segment and have determined that the best course of action for 2011 is to implement a phase-out of these products and focus our resources on providing innovative, quality products in our fuels transfer and metering market segment.

Consequently, as of January 31, 2011, the lube product line will be discontinued. Affected products include the LP50P36Q115, LP50P18Q12, LP50P18Q115, and LP200P18Q. Tuthill is committed to supporting future warranty returns and availability of repair/replacement kits for these products for a period of 2 years. Please communicate as soon as possible with your TTS representative to indicate what unit volumes you will need to accommodate a phase out of this product for your business. We would like to have this feedback from you before January 11, 2011 in order to finalize our phase-out production plan.

Please feel free to address any questions you may have to your Tuthill representative, regional sales director, or customer service representative.
