

Product Announcement

FRPA0001

Date of Bulletin: July 1, 2008
Effective Date: July 1, 2008
Pump Series Affected: Series 700V & 300V
Affected Components: Anti-Siphon Valves
Subject: General Information
Issuing Authority: Sales

Anti-Siphon Valves on the 700V and 300V Series Pumps

Beginning June 23, 2008, Tuthill Transfer Systems is placing a ¼" plug into the anti-siphon valve in the discharge side of the pump.

If a customer needs to have the anti-siphon feature, they will need to remove the plug **and** install the 700KTH1067 Return Line Kit.

The decision to plug the anti-siphon valve was made to prevent the possibility of leaks caused by unintended circumstances occurring in the field. The installation of the Return Line Kit, when anti-siphon is required, also prevents the possibility of leaks.

Accordingly, the 700KTH0931 replacement kit for the anti-siphon valve will no longer be made available.

Tuthill Transfer Systems will continue to evaluate the function of the anti-siphon valve, and improve it as necessary to accomplish the things our customers' request. As these improvements become available, a notice will be sent to all of our valued distribution partners.

Please contact your Sales Representative or our Customer Service Department if you have any questions at 800-634-2695.

Sincerely,

Jeff Gerber
