

Service Bulletin

#FRSB0019

Date of Bulletin: April 15, 2008
Effective Date: April 15, 2008
Pump Series Affected: Series 700V & 300V
Affected Components: N/A
Subject: General Information
Issuing Authority: Sales

Series 700V Motor (Part # 700F2683)

Since there are now two discharge flanges for the 700V Series Fuel Transfer pumps, both flanges will be included with the 700F2683 motor. The regular flange, used on 700V Series pumps without a meter, will be mounted to the pump casting. The flange for the 700V Series pumps with a meter will be included in the box.

The new list price of part number 700F2683 is now \$475.00

Series 700V & 300V Bung Adapters

Both the 700V and 300V Series pumps now have one bung adapter. The part number for this common bung adapter is 700F0651. The suction port on the 700F0651 is now 1.25" FNPT. There is also a .25" FNPT port in the side of the adapter. This allows a customer to plumb a return line from the anti-siphon valve on the 700V and 300 Series pumps back to the tank.

This bung adapter replaces the older bung adapters part number 700F2170 (1" suction port), and part number 300F7776 (1.5" suction port). If either the 700F2170 or 300F7776 bung adapters are ordered, they will be changed to the new part number 700F0651.

Line Switch (Part # 700F3124)

The line switch (part number 700F3124) will be discontinued when our current inventory is depleted. This switch was used in the 1200 and 700 Series pumps.
